

**#SURF #SUPPLY #FUN #AFFORDABLE #QUALITY**

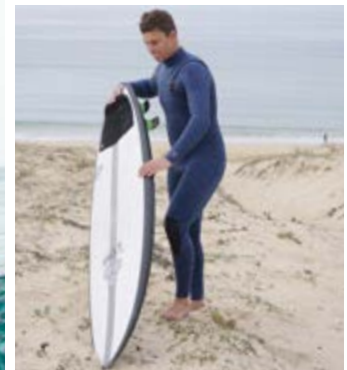

Developed in the South West of France in the heart of the surf industry hub of Europe, Mdns surfing continues to innovate and keep in touch with key market trends whilst keeping our main objective of competitive pricing at the forefront of our priorities.

MDNS surfing is represented by a highly passionate and motivated team of industry professionals that have an extensive passion for surfing and everything that surrounds it.

All products are developed and improved with regular feedback from our team of professional athletes to ensure we are at the top of our game and continue to provide the best offer of surfing hardware on the market at an importantly affordable cost.

# MDNS WETSUITS TECHNOLOGY

## SPECS

### ZIG ZAG HEM

Classic Hem Finish

### PRE-BENDED

Pre-bended in arms, legs & back of knees for comfort and flexibility

### WATERPROOF TAPE

Tape is a flexible and strong adhesive product Water resistant, flexible & strong

### GLUED BLIND STITCHED

Maximum seam stretch & hard-wearing quality with zero water penetration

### FLAT STITCHED

Flat-stitched seams prevent chafing, feeling extra comfort

### POLAR PLUSH

Thermal Fleece lining

### SUPRATLEX

Durable abrasion resistant SUPRATLEX outer fabric helps to prolong the life of the suit

### SUPERSTRETCH

100% Superstretch neoprene of wetsuits parts

### MESH

Allows excess water to drain fluently

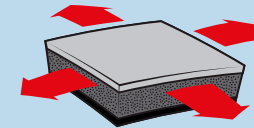

### JERSEY

A soft, plain-knitted fabric  
The main material for our wetsuits

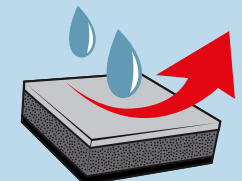

### YULEX

Neoprene material made from natural rubber harvested from rubber trees.

## GREEN TECHNOLOGIES

PURE

## FOR ECO-FRIENDLY NEOPRENE

2,698kg or 24%  
CO<sub>2</sub> REDUCED PER WETSUITS

### NATURAL RUBBER FOAM

At MDNS, our renewable Yulex natural rubber is tapped from hevea trees that can produce rubber for over 30 years. The raw natural rubber comes from sources that are Forest Stewardship Council certified by the Rainforest Alliance - meaning the trees aren't grown on newly clear-cut rainforest land, like some of the world's supply.

### AQUA X : WATER BASED GLUE

Our R&D team turned solvent-based laminating glue into water-based glue, eliminating harmful volatile organic compounds (VOCs).

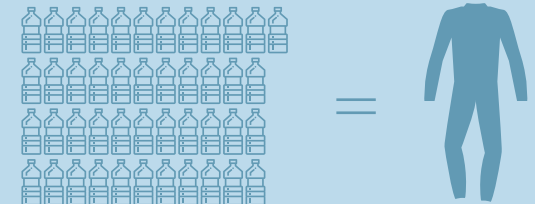

### SOLAR ENERGY SYSTEM

Our Production facilities for finished goods are equipped with solar panels on the roof top to provide green energy and make the production even greener. Reducing Carbon Footprint & Generating clean energy

### RECYCLED POLYESTER

In our PURE range, our fabrics are knitted with polyester yarn made from recycled plastic bottles. This helps reduce waste and material consumption at the same time

45 plastic bottles

Fabrics for one wetsuit

## THE PERFECT MIX OF OUR GREEN TECHNOLOGIES THAT CREATE THE MOST ECO-FRIENDLY NEOPRENE

### WATER SAVING DYEING MACHINE

We introduce fabric dyeing machines that save water and energy, reducing 60% in water & energy consumption.

# Men's Eco Wetsuits

**PUURE** YULEX® SERIES

Our eco-friendly manufacturing process allows us to join **[1% FOR THE PLANET]** an environmental, non profit organisation to whom we donate 1% of our net sales.

The inner core of the **PUURE** wetsuit is made of YULEX® foam, a **100% natural** rubber compound. The fabric is made of **recycled materials**, and we use **water-based glue** to minimize environmental impact.

We designed all our PUURE series wetsuits combining Yulex foam & Polar lining. This warm and flexible construction **allows you to use a suit that is 1mm thinner than usual.**

# Men's Superstretch Wetsuits

**PRIIME**

S-FOAM® SERIES

The PRIIME wetsuits are our state of the art **superstretch series**.

Equipped with a chest zip for **easy entry and maximum comfort**, we have focused on the quality of materials to offer the **best product available yet**.

The S-FOAM inner core is **20% lighter than regular foam**, and, combined with the smooth, soft and durable NEOSPAN fabric, it offers **unrivalled stretch capability**.

This combination **increases freedom of movement** and results in a high-end, performance product.

# Fins

## MDNS FINS TECHNOLOGY

### # CARBON HONEYCOMB

This construction combines woven carbon fabric with hand laid carbon thread, designed to deliver controlled flex and enhanced base stiffness.

### # HONEYCOMB

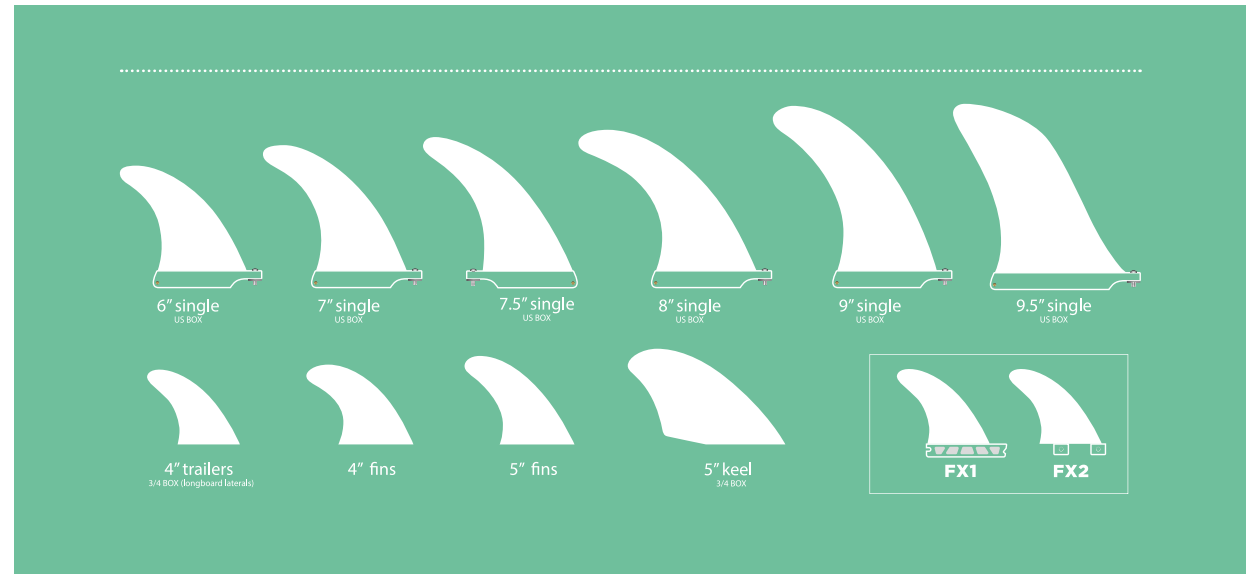

This construction is designed to deliver the feeling of a traditional fiberglass fin with the added performance of reduced weight.

### # FULL FIBERGLASS

Hand layed fiberglass construction delivering standard performance. The high fiberglass content makes these fins stiff and responsive.

### # PVC

These fins are molded from engineering grade polymer. The flex of these fins has been designed to help novice surfers maintain speed and acceleration as they learn to execute turns and maneuvers.

## FINS CHARACTERISTICS

### BASE

Base is the length between the leading and trailing edge where the fin meets the board. Base is primarily linked to drive. Fins with a longer base will offer substantially more drive and acceleration.

### DEPTH

Depth is the distance the fin penetrates into the water. Depth directly relates to hold. The greater the depth the more hold, the shorter the depth the more a board will slide and release.

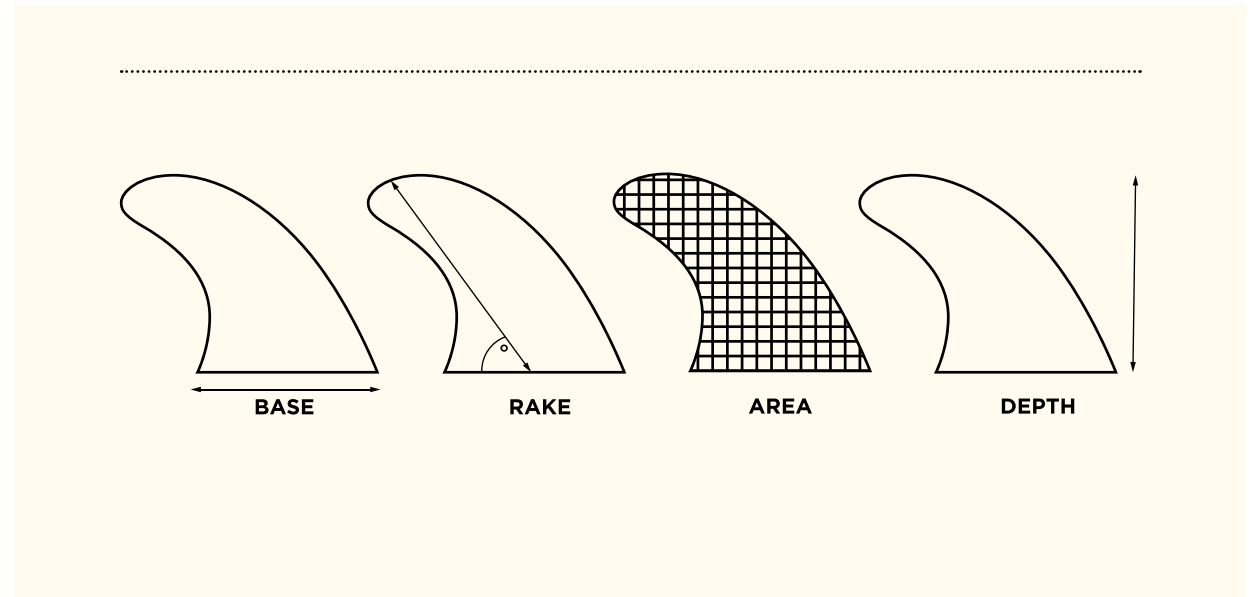

### RAKE

Sweep is the angle measuring how far the outline of the fin is curved backwards. Sweep has a direct influence on pivot. Fins with more sweep produce a longer turning arc, less sweep offers a tighter turning arc.

### AREA

Area is the total surface area of the fin.
